Exercises 7 PRO3

Exercise 7 – Spring Boot REST Server with a Database using JPA

Follow this tutorial for connecting a Java Spring Boot REST server with a H2 database using JPA:
https://www.jetbrains.com/help/idea/spring-support-tutorial.html

Use Postgres instead of H2, if you prefer that.

Feel free to skip “Add Spring Boot Actuator” and the rest if you want since you might be using a different technology for your presentation tier (frontend).
